

A. Continuous Intra-Array Epigenetic Architecture

B. CENP-A Density Across Same HOR Arrays (3.84x Global Contrast)

C. Pairwise Intra-Array Fold Enrichment (CDR / Flank)

D. Linker Geometry and CENP-B Box Compatibility Model

Peripheral Heterochromatin (Canonical H3 + H1)

17-bp CENP-B box CANNOT fit in 13-bp linker! (Steric clash)

Active CDR Kinetochores Domain (CENP-A Dimer Lattice)

Expanded linkers (20 & 60 bp) accommodate 17-bp box at unpeeled gyre (+55 bp) and linker (+90-100 bp)!
